BUG FIXES

JMP-2340 - Member Profile Not Working Properly

The following has been reported on the member's profile page:

- Member success percentage is not working properly as some elements are not consistent.
- For example, the quick link button at the top section does not appear despite a few sections being deleted, however it does appear on the dashboard page.
- Country section is set to "Australia" despite not being filled.

JMP-2370 – News Post Preview

The preview button in the news module does not take you to a preview unless the article is already valid and live.

JMP-2200 – Candidate / Member Validation - Cannot Validate

Administrators cannot validate a member's account in the CMS.

JMP-2358 – Admin - All Sites Summary

The followings are added to the "Admin Global" > "All Sites" page:

- Total live sites
- Total sites
- Ability to sort
- Ability to export into CSV

JMP-2397 – Member Dashboard Headings

Fixes on the HTML structure display for Licenses under the member's profile page:

- Change License + Role name to H3
- License type is similar to NSW Australia text
- Reduced in between gap

JMP-1895 - Multiple Selected in Select Option List

The location dropdown in the advanced search has multiple values being selected on page load while the dropdown element itself is not a multiselect dropdown. This should not be the case as only one location can be selected, and has now been resolved.

JMP-2386 - Share with LinkedIn isn't Working on IE11

Social media sharing has been revisited for IE11, and is working now.

IMPROVEMENTS

JMP-168 – File Manager Overwrite Confirmation

A confirmation message is now in place when a file is to be overwritten using the file manager to upload files.

JMP-1583 – News Page Errors

W3C compliance issue found on the News page and resolved.

JMP-1687 – Document Language Errors

A W3C compliance where the document has invalid language code was reported and resolved.

JMP-2360 – Success Factors - Candidate Integration

All applications and candidates will be pushed to Success Factors only when they apply for a job via the JXT platform. This process includes a valid configuration on integration settings and the jobs will be configured with a reference number.

JMP-2245 – Multi-Lingual Option for Campaigns

Multi-lingual support for campaigns has now been added and is available.

TASK

JMP-2372 – Google Maps Search from Webservice Not Working

Jobs posted via Webservice were not being updated with the maps co-ordinates. This issue has now been resolved and all jobs posted via Webservice will be updated by our application periodically to the specified address.

JMP-2368 – Missing Button for Favourite Searches

There were no action links available to perform saved searches. This has now been added.
